

How To Assemble Bridle Set

Headstall attaches to the ring between mouth piece and rein leathers. Rein leathers attach to ring between headstall and chin-strap.

How To Attach Horseman's Reins

Horseman's Reins are 22' in length. When tied to your rein leathers, loop rein will be 10' and lead 12'.

To attach, first place slobber leather on snaffle ring (1) between headstall and chin strap.

Starting with rein leather on right side, thread tassel end (2) through both holes of one leather, from inside to outside. Make a half hitch around leather leaving end pointing down as shown.

Next thread popper end through rein leather on left side (3) again from inside to outside. Make half hitch by running the lead end under, then back over the top of leather. Lead end will come out pointing down toward ground.
